

A20 – T.B. INTESTINE

TUBERCULOUS ULCER SMALL INTESTINE

Specimen of loop of small intestine about 20 cms, in length. The serosal surface shows 3 transverse bands of peritonium, where it is thickened and lusterless. The mucosal surface shows ulcers corresponding to the site of thickened peritonium externally. The ulcers are transversely running (Girdle type) have inverted edges and the floor is shaggy.
