

B17 – SARCOID GRANULOMA-SPLEEN AND LIVER

GROSS APPEARANCE:- Specimen of two slices of spleen and one slice of liver. The spleen is enlarged in size and shows many pale yellow coloured homogenous nodules, the largest nodule seen just beneath the capsule is about 1 cm. in size. The remaining splenic tissue is congested. Liver slice shows grossly normal appearance.

MICROSCOPY:- Sections from spleen showed sarcoid granulomas. Sections from the liver showed collection of large mononuclear cells with occasional ill formed giant cells - ill formed sarcoid granulomas.
