

D7 – LEIOMYOMA WITH HYALINE DEGENERATION

UG

D-7

HISTORY:- A lady aged 42 years presented with a mass in the abdomen.

GROSS APPEARANCE:- Specimen of uterus, larger in size shows an intra-mural huge fibroid. The central area shows whorling of the fibres. Surrounding that area gelatinous material is visible with few strands of liomyomatous tissue. The uterine cavity is free and smooth but very much elongated.

MICROSCOPY:- Shows structure of liomyoma with hyaline degeneration.
